

Mathletics!

We are excited to be using the same school wide math program as last year! This program is designed to enhance our curriculum and we will be using the same criteria as last summer. The program is based on points earned over the summer.

Your child can earn points 2 different ways: First: Play Live Mathletics. These games are designed to strengthen computation and may be played against the computer, against classmates, or against other students around the world! Second: Work on activities. The activities are worth more points and allow your child to accumulate points faster.

Please note that although your child can challenge students from across the world, they cannot communicate with anyone online. This program can be played on a desktop or laptop, it can also be played on a tablet device if you download the free app: Mathletics for students.

- Our goal is for every student to achieve a silver certificate over the summer.
- In order to achieve this goal, the student needs to accumulate 5 bronze certificates.
- In order to achieve a bronze certificate, your child has to earn 1000 points in one week. If they earn 10,000 points in one week it still only counts as a bronze certificate.
- This means 5 different weeks of math and the weeks do not need to be consecutive.

All students have their math username and password. Once logged in, both options of Live Mathletics and the Activities are located in the upper right hand corner of the home screen.

Have a wonderful summer, IHM Math Department
